SIMPLE ONE-TIME INTEREST

$$I = P_0 r$$

$$A = P_0 + I = P_0 + P_0 r = P_0 (1 + r)$$

I is the _____ A is the _____: principal plus interest P₀ is the _____ (starting amount)

r is the _____ (in ____ form.

Example: 5% = 0.05)

Example

A local business asks for a \$750 loan to cover some expenses and agrees to repay it in 60 days with 5% interest. How much interest will you earn?

 $P_0 =$ (the principal) r=____(___% rate) I=\$____×___=\$____.

You will earn \$_____ in interest.

Question An organization requests a \$1,200 loan for a short-term project and agrees to repay it in 90 days with 6% interest. How much interest will you earn?

Simple Interest over Time $I = P_0 r t$

$$A = P_0 + I = P_0 + P_0 r t = P_0(1 + r t) I$$

I is the

A is the end amount: principal plus interest _____ is the principal (starting amount)

r is the interest rate in decimal form

t is

The units of measurement (years, months, etc.) for the time should match the time period for the interest rate.

Example
Imagine your state is funding a new wildlife reserve and issues bonds to raise money for the project. You purchase a \$2,000 bond that pays 4% interest annually and matures in 10 years. How much interest will you earn?

Each year, you would earn _____% interest: _____×___=\$80 in interest. So over the course of ten years, you would earn a total of __×__=\$800 in interest. When the bond matures, you would receive back the \$2,000 you originally paid, leaving you with a total of \$2,800.

APR – Annual Percentage Rate

Interest rates are usually given as an
______ – the total interest
that will be paid in the year. If the interest is
paid in smaller time increments, the APR will be
divided up.

For example, a 6% APR paid monthly would be divided into twelve 0.5% payments. $6 \div 12 = 0.5$ A 4% annual rate paid quarterly would be divided into four 1% payments. $4 \div 4 = 1$

Question

A nearby county is raising funds to build a new library and issues bonds to support the project. You decide to purchase a \$1,500 bond that pays 3.5% interest annually and matures in 8 years. How much interest will you earn?

Example

Corporate bonds are issued by companies to raise funds for their projects. Suppose you purchase a \$2,000 corporate bond with a 6% annual rate, paid semi-annually, with a maturity in 3 years. How much interest will you earn?

(the principal)

r=____ (3% rate per half-year)

t=___ (3 years = 6 half-years)

I=2000×____×6=\$360.

You will earn \$360 interest in total over the three years.

Since interest is paid semi-annually (twice a year), the ___%

interest is divided into two 3% payments. ___ = \$2000

Question Question Municipal bonds are issued by local Samira invests \$5,000 into an account at an annual rate of 1.2% simple interest for 18 months. governments to fund public projects. Suppose you buy a \$1,500 municipal bond with a 5% What is the Principal in this scenario? A 1.2% annual interest rate, paid semi-annually, with a B 0.012 maturity in 2 years. How much interest will you C \$5,000 earn? D 1.5 What is the interest rate for this account? A \$5,000 B 1.5 C 1.2% D 0.012 Question Example Samira invests \$5,000 into an account at an annual rate of 1.2% A payday lender charges \$45 in interest for a simple interest for 18 months. two-month loan of \$600. Find the annual interest What number do you use to represent the interest rate in the simple interest formula? rate they are charging. A \$5,000 I=\$45 (interest) B 0.012 C 1.2% $P_0 = 600 D 1.5 t=2 months/12 months What is the length of time of this investment, in years? Using $I=P_0\times r\times t$, we get $_=__\times __\times _$. Solving A 0.012 Calculate the simple interest earned on this account for r, we find r=0.45, or 45%. B 1.2% C 1.5 D \$5,000

Question A credit union charges \$20 interest for a three-month loan of \$400. Find the annual interest rate they are charging.	

- 1

Compound Interest $P_n = P_0 (1 + r/k)^{Nk}$ P_{N} is the _____. P₀ is the starting balance of the account (also called initial deposit, or _____) r is the _____ in decimal form k is the ______in one year If the compounding is done annually (once a year), k = 1. If the compounding is done quarterly, k = 4. If the compounding is done monthly, k = 12. If the compounding is done daily, k = 365. Question An investment account offers an annual interest rate of 5%, compounded semiannually, to encourage long-term savings. Suppose you deposit \$7,500 into the account. How much will the account balance be after 10 years?

Example

A new savings bond offers a fixed interest rate and compounds quarterly, providing an attractive option for long-term investments. Suppose you invest \$5,000 in a savings bond with an annual interest rate of 4%, compounded quarterly. How much will your investment be worth after 15 years?

 $\begin{array}{llll} P_0 = & & & & & & & & & & & & \\ r = & & & & & & & & & \\ k = & & & & & & & & \\ N = & & & & & & & \\ N = & & & & & & & \\ N = & & & & & & & \\ N = & & & & & & \\ N = & & & & & & \\ N = & & & & & & \\ N = & & & & & & \\ N = & & & & & & \\ N = & & & & & & \\ N = & & & & & & \\ N = & \\ N$

Question

A retirement fund offers an annual interest rate of 4.5%, compounded annually, to help investors grow their savings. Suppose you contribute \$10,000 to this fund. How much will the account be worth after 12 years?

Example

You know that you will need \$25,000 for a down payment on a house in 15 years. If your account earns 3.5% interest compounded monthly, how much would you need to deposit now to reach your goal?

$$P_n = P_0 (1 + r/k)^{Nk}$$

$$P_0 = \frac{P_N}{(1+r/k)^{N \cdot k}}$$

Question

You want to save \$30,000 for a car purchase in 5 years. If your savings account earns 6% interest compounded semiannually, how much do you need to deposit now to meet your goal?

1. Samantha borrows \$2,400, agreeing to pay it back with 1.5% annual interest after 15 months. How much interest will she pay?		
2. A retiree invests \$5,000 in a savings plan that pays 4% per year. What will the account balance be at the end of the first year?		
3. Evelyn invests \$15,000 into an account at an annual rate of 0.5% simple interest for 24 months.		
a. What is the principal in this scenario?		
b. What is the interest rate for this account?		
c. What number do you use to represent the interest rate in the simple interest formula?		
d. What is the length of time of this investment, in years?		
e. Calculate the simple interest earned on this account.		
4. You deposit \$500 in an account earning 6% interest compounded annually. How much will you have in the account in 10 years?		

Annuity Formula $P_{N} = \frac{d((1 + r/k)^{Nk} - 1)}{(r/k)}$ P_{N} is the balance in the account after N years. d is the _____(the amount you deposit each year, each month, etc.) r is the _____ in ____ form.
k is the _____ in one year. If the compounding frequency is not explicitly stated, assume there are the same number of compounds in a year as there are deposits made in a year. Example A savings plan allows you to deposit money monthly into an account that earns interest. Suppose you deposit \$150 each month into an account earning 5% annual interest, compounded monthly. How much will you have saved after 25 years? Monthly deposit d = \$150Annual interest rate (r): 5% ($\mathbf{r} = \mathbf{0.05}$ as a decimal) Compounding periods per year k=12 (compounded monthly) Number of years N = 25 $P_{N} = \frac{d((1 + r/k)^{Nk} - 1)}{(r/k)} \quad P_{N} = \frac{((1 + //)^{-x} - 1)}{(///)}$ = \$162,561

When do you use this?

Annuities assume that you put money in the account on a regular schedule (every month, year, quarter, etc.) and let it sit there earning interest.

Compound interest assumes that you put money in the account once and let it sit there earning interest.

Compound interest: ______
Annuity: _____

Question

You decide to save for a down payment on a house by depositing \$200 each month into a savings account that earns 4% annual interest, compounded monthly. How much will you have saved after 15 years?

Example	
A savings account pays 4% interest. If you deposit \$10 a day	
into this account, how much will you have after 15 years?	
How much of that amount is from interest?	
Daily deposit d= \$10	
Annual interest rate (r): 4% (r = 0.04 as a decimal)	

Compounding periods per year k=365 (compounded daily)

Number of years N = 15

$$P_{N} = \frac{d((1 + r/k)^{Nk} - 1)}{(r/k)}$$
 $P_{N} = \frac{((1 + r/k)^{Nk} - 1)}{(r/k)}$
 $P_{N} = \frac{(1 + r/k)^{-x} - 1}{(r/k)}$
 $P_{N} = \frac{(1 + r/k)^{-x} - 1}{(r/k)}$

Total deposits: \times \times = \$54,750 Interest earned: \$_____ - \$___ = \$37,620

Question

You decide to invest \$200 each month into an account earning 5% annual interest, compounded monthly.

- a) How much will you have in the account after 25 years?
- b) How much total money will you contribute to the account?
- c) How much of the total balance will come from interest?

Question

A retirement savings account offers 2.5% annual interest. If you deposit \$3 per day into this account, how much will you have after 8 years? How much of that total will come from interest?

Example

You want to save \$150,000 for a down payment on a house in 20 years. Your savings account earns 6% annual interest, compounded monthly. How much do you need to deposit each month to reach your goal?

Annual interest rate (r): 6% (r = 0.06 as a decimal) Compounding periods per year k=12 (monthly deposits)

Target amount
$$P_{20} = \$150,000$$

$$P_{N} = \underline{d((1 + r/k)^{Nk} - 1)}$$

farget amount $P_{20} = \$150,000$ $P_{N} = \underline{d((1 + r/k)^{Nk} - 1)}$ (r/k) $d = \underline{(/ (1 + / /)^{Nk} - 1)}$ $= \underline{x(/ (1 + / /)^{Nk} - 1)}$ ≈ \$324.68

Example

If you invest \$50 each month into an account earning 4% annual interest, compounded monthly, how long will it take for the account to grow to \$5,000?

Monthly deposit d= \$50

Annual interest rate (r): 4% (r=0.04 as a decimal)

Compounding periods per year k=12 (monthly deposits)

Target amount $P_N = $5,000$

Unknown (N): Time in years
$$P_{N} = \frac{d((1 + r/k)^{Nk} - 1)}{(r/k)}$$

$$\log \left[\frac{P_{N}(r/k)}{d} + 1 \right] = \log[(1 + r/k)^{Nk}]$$

$$= Nk \log(1 + r/k)$$

When do you use this? Payout Annuity Formula $P_0 = d(1-(1 + r/k)^{-Nk})$ Payout annuities assume that you take (r/k) money from the account on a **P**₀ is the balance in the account at the beginning _____(every month, year, (starting amount, or _____). quarter, etc.) and let the rest sit there earning **d** is the _____ (the amount you interest. deposit each year, each month, etc.) **r** is the annual interest rate in decimal form. Compound interest: _____ **k** is the _____ in one Annuity: year. Payout Annuity: _____v **Question** Example After retiring, you plan to withdraw \$1,500 every month for 25 years You plan to withdraw \$2,000 every month for 15 from your retirement account. The account earns 5% interest annually, years from your retirement account. The account compounded monthly. How much money will you need in your account when you retire? earns 4% interest annually, compounded monthly. How much money will you need in your account d=1500: the monthly withdrawal when you retire? r=0.05: 5% annual interest rate k=12: compounding occurs monthly N=25: withdrawals are made for 25 years $P_0 = d(1-(1 + r/k)^{-Nk})$ (r/k) $P_0 = 1500(1-(1+0.05/12)^{-25\cdot12}) = 279,495$ (0.05/12)

Question

You want to withdraw \$30,000 each year for 20 years. Your account earns 8% annual interest.

a) How much do you need in your account at the beginning?

Question

b) How much total money will you withdraw over the 20 years?

Question

c) How much of the withdrawn amount will come from interest?

Example

You know you will have \$750,000 in your account when you retire. You want to take monthly withdrawals for a total of 25 years. Your retirement account earns 6% annual interest. How much will you be able to withdraw each month?

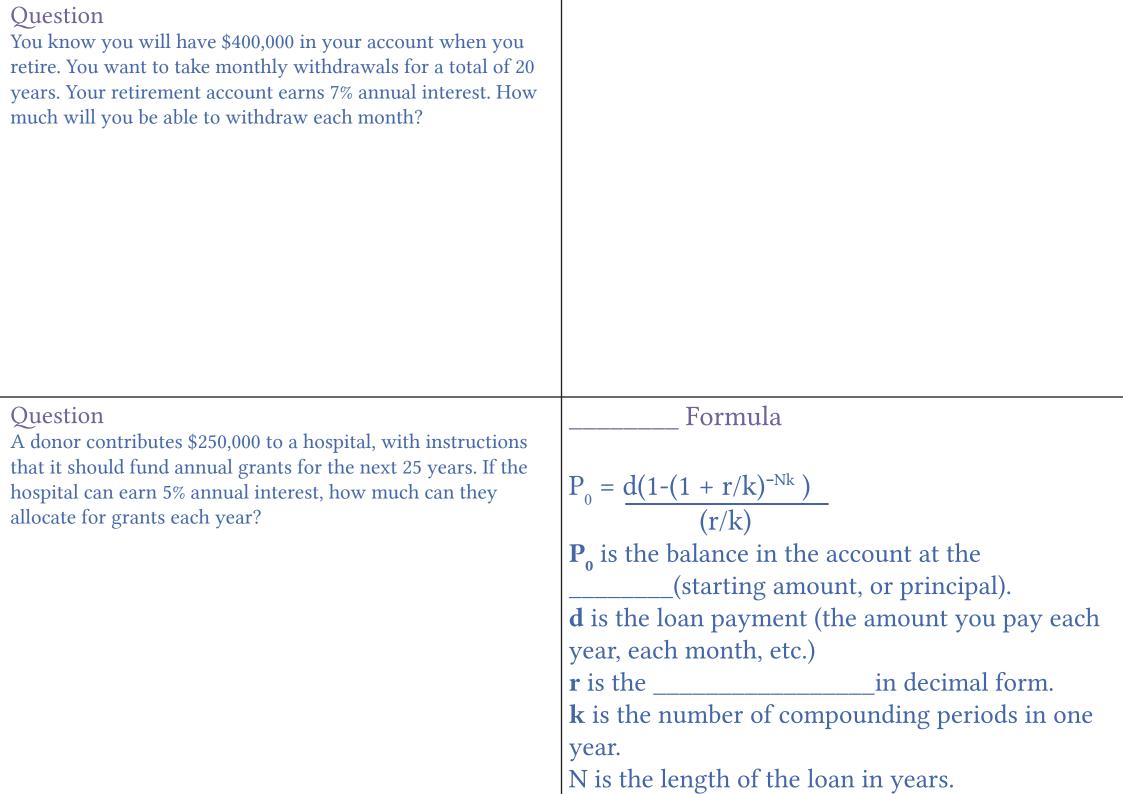

r=0.06: 6% annual interest rate

k=12: compounding monthly

N=25: withdrawals for 25 years $P_0 = 750,000$: starting balance

$$P_0 = d(1-(1 + r/k)^{-Nk}) \over (r/k)$$

$$d = \frac{P_N(r/k)}{(1-(1+r/k)^{-Nk})} = \frac{(/)}{(1-(1+ /)^{-})} = 4827.84$$

When do you use this?

The loan formula assumes that you make loan payments on a regular schedule (every month, year, quarter, etc.) and are paying interest on the loan.

Compound interest:	
--------------------	--

Annuity: _____

Payout Annuity: _____

Loans:

Question

You can afford \$250 per month as a car payment. If you secure an auto loan at 5% interest for 48 months (4 years), how expensive of a car can you afford? In other words, what loan amount can you pay off with \$250 per month?

Example

You can afford \$300 per month as a car payment. If you can get an auto loan at 4% interest for 72 months (6 years), how expensive of a car can you afford? In other words, what loan amount can you pay off with \$300 per month?

d=300: the monthly loan payment

r=0.04: 4% annual interest rate

k=12: monthly compounding

N=6: payments for 6 years (72 months)

$$P_0 = d(1-(1 + r/k)^{-Nk}) \over (r/k)$$

$$P_0 = \underline{\qquad (1-(1 + \underline{\qquad /}\underline{\qquad })^{-6.12})} = 19,098$$

Question

You want to take out a \$200,000 mortgage (home loan). The interest rate on the loan is 4%, and the loan is for 15 years. How much will your monthly payments be?
